Steps to execute:

1) Open command line, and go to myservers/h2 directory
2) Type, java -cp h2*.jar org.h2.tools.Server -tcp -pg
3) After the server starts, open a new command line and go to the Assignment directory
4) Execute JZWebServer.java: javac JZWebServer.java
5) Run JZWebServer: java JZWebServer
6) After the connection is made to the database, open a browser tab and type
   http://localhost:40112/customerlogin.html
7) Login: Yogi Password: 123
8) **When clicked on Go button, it should show the current list of flights the customer is booked on. Instead it is redirecting to customer login page with an error Database+error+while+retrieving+flights**
9) Don't change anything in JZWebServer.java
10) I think error is in CustomerServlet.java (with the SQL queries).

Server: JZWebServer.java
Servlet: CustomerServlet.java
Front-end: customerlogin.html
